

Popular game 24 is based on a card game which is described in the section "Rules".

Web-pages have also responsive design.

To play this game, you should write your answer in the input box using each number and math signs as in the example from Rules page. Then press the Check button. If you enter unacceptable symbols, you'll get notification. There are several checks for different types of mistake.

If you enter the right expression, then you'll get a message that it's right, new set of card and score. The input box will be automatically clean up.

If you don't know how to solve you can press Give up button. You'll get the solution, new set of cards and score as you failed.

In real game there are some combinations that do not have the solution. This game also contains any combinations, so it looks more real and more interesting. If, after pressing Give up button, there is "No solution" answer you **will not get** any score in solved or failed column.
